Certification

- Getting Started With DevOps On AWS

Profile Summary

Experienced Flutter Developer at ATPL (Anandpusp Technology Private Limited), skilled in designing, developing, and maintaining mobile applications. Proficient in Flutter framework and Dart programming language, with a solid understanding of mobile UI/UX design principles. Proven ability to collaborate with cross-functional teams to deliver high-quality, performance-driven applications. Adept at troubleshooting and debugging to ensure seamless functionality. Committed to staying updated with the latest mobile development trends and technologies. Seeking to leverage expertise in Flutter development to contribute to innovative projects and drive business growth.

Work Experience

Software engineer -Flutter Developer
Anandpushp Technologies PVT LTD
11/2021 - Present

My role is to write clean code, making interactive ui with functionality and api integration using flutter and dart. I have developed more than 7 application in flutter and have good knowledge on both flutter and dart. For managing state in flutter Im using provider and have worked with GETX in previous project. Both the state management tool has their own pros and cons. GETX not only provides state management feature but also provides other features. When Im writing this flutter version is 3.Also having Experience in Provider state management.

AI CHAT BOT
2 Days

AI Chatbot with Flutter, Dart, and Dialogflow Overview:

Develop a cross-platform AI chatbot using Flutter for the frontend, Dart for coding, and Dialogflow for natural language processing.

Key Features:

- Cross-Platform: Compatible with Android and iOS.

- Natural Language Processing: Uses Dialogflow for handling queries.
- Interactive UI: Built with Flutter for a user-friendly experience.
- Real-time Communication: Provides immediate responses.

Technical Details:

- Flutter Framework: Ensures smooth cross-platform performance.
- Dialogflow Integration: Manages user input and responses.
- UI Design: Uses Flutter widgets for an intuitive chat interface.

Workflow:

1. Setup: Install Flutter and Dart.
2. Create Project:Initialize and design the chat interface.
3. Integrate Dialogflow:Connect and handle messaging.

This project showcases how Flutter, Dart, and Dialogflow can create an efficient AI chatbot.

Ecommerce Application (Android / Ios) : React Native
6 Months

Emporium E-commerce App

Overview:
Emporium is an e-commerce app built with React Native (front-end), Laravel (back-end), and Firebase (real-time data and

authentication).

Key Features:

1. User Authentication:
- Secure login via Firebase.
- Social media login options.

2. Product Catalog:
- Browse and search products.
- Detailed product pages with reviews.

3. Shopping Cart and Checkout:
- Manage cart items.
- Secure multi-payment checkout.

4. Order Management:
- View order history and statuses.
- Cancel/return orders.

5. User Profile:
- Manage personal info and addresses.
- Track loyalty points.

6. Notifications:
- Real-time order and promo alerts.

7. Admin Panel:
- Manage products, orders, and users.

8. Analytics:
- Sales and user behavior insights.

Technology Stack:
- Front-end:React Native
- Back-end:Laravel
- Database:MySQL
- Real-time: Firebase

Task Management Application
3 Days

Flutter ToDo App

Overview:
The Flutter ToDo App is a task management tool built with Flutter and Dart, utilizing Firebase for real-time data, authentication, and crash analytics. The project is version-controlled using GitHub.

Key Features:

1. User Authentication:
- Secure login with Firebase Authentication.
- Social media login (Google)

2. Task Management:
- Create, update, delete tasks.
- Set due dates and reminders.
- Categorize tasks.

3. Real-time Sync:
- Instant updates with Firebase Realtime Database.

4. User Profile:
- Manage personal info and preferences.

5. Notifications:
- Push notifications for reminders.

6. Crash Analytics:
- Monitor crashes with Firebase Crashlytics.

7. Version Control:
- Managed with GitHub.

Technology Stack:
- Front-end:Flutter, Dart
- Backend: Firebase (Realtime Database, Authentication, Crashlytics)
